

Following the success of the Eco committee last year, the new members have selected energy and marine as the new topics to concentrate on. The belief is this will not only increase our understanding of the changes we need to make to help save the planet but also safeguard LIA's green flag status.

The focus of the topics will be:

Marine: Our current impact on seas through daily life in schools, homes and streets.
Proactive steps required to make positive changes to reverse the adverse impact.

Energy: Understand our current reliance of energy use and environmental friendly alternatives available which will attempt to reverse climate change.

In addition to the above we had a visit from Danni. The main message from her presentation was the causes and effects of air pollution. In order to take on board her message the committee will select a park and stride point. The aim is to encourage walking and reduce vehicle use.
